

ARGUSHosting.NET

Hosting Service for ARGUS Applications

ARGUSHosting.NET is a global solution designed to allow the ARGUS Software application suite to be hosted and accessed by clients from anywhere in the world. Presentation Virtualisation creates virtual sessions in which applications present their user interfaces remotely. Processing happens on the hosted server whilst graphics, keyboard, mouse and printers are handled at the end-user terminal. A virtual session can run a single application or present the user with multiple applications depending on your business requirements.

Key Features and Benefits

- **Application Management**
Applications are setup and managed for you by ARGUS Software's highly skilled support team.
- **Centralised Data & Licences**
Even in a multi office environment, ARGUSHosting.net allows you to centralise your data & licences painlessly and effectively.
- **User mobility**
You can access your applications any place any time, all you need is an internet connection and the Remote Desktop client available on any Windows platform.
- **Single point of responsibility**
ARGUSHosting.Net is responsible for maintaining your application in tip top condition.
- **Security**
ARGUSHosting.Net uses an Encrypted File System to ensure that only you and your team can access your files and data.
- **Robustness & Reliability**
Our hosting environment is available to meet all your needs 24/7:
8am till 8pm support
Comprehensive Service Level Agreement
Failover support
Comprehensive backup process
- **Remove IT Infrastructure cost.**
No servers, No desktop support, No backups to manage and No disaster recovery, we handle it all!
